

BIOGRAPHY:

Prof. Guénaël LE QUILLIEC

I received my PhD degree in 2011 from the doctoral school of Centrale Nantes. After a post-doctorate at the University of Technology of Compiègne, I became an assistant professor of mechanical engineering in 2013 at Polytech Tours, the engineering faculty of the university of Tours. My teaching focuses on design of machines, computer-aided design/manufacturing, and strength of materials. My research topics, in the laboratory of mechanics Gabriel Lamé, mainly concern the optimization of manufacturing processes and the mechanical characterization of materials by inverse approaches, both experimentally and numerically.
